

Star Pathway

Subtraction within 10

Each player chooses their own coloured counters to use (for example player 1 uses all blue counters, player 2 uses all red counters). Players take turns to roll a dice and find the row for that number. They answer the first fact in that row then put a counter on top of that circle. When all of the circles in a pathway have been covered with counters the player who covers the last circle wins that star and covers the star too. The first player to cover 3 stars is the winner.
